DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Jou (US 6,925,067).

Jou discloses a multi-carrier receiver, see Fig.7, comprising

local oscillators (not illustrated) for generating “internal multicarrier” (f_1 , f_2, f_3),

a plurality of frequency conversion units (102A, 102B, 102C) for downconverting the received signal to baseband signals,

a plurality of filters (not illustrated) in the demodulators (104A,104B,104C) for filtering the downconverted signals for providing to a rake receiver (106). See col. 11, lines 26-30.

3. Claims 12 and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Maddiotto et al (US 6,690,735).

Maddiotto et al discloses separating a multi-carrier receiver, see Fig.2, comprising using intact the existing 1X method for one carrier (CH1),

Art Unit: 2638

performing a down-conversion one more when its neighboring rest two carriers are separated (DEM1, DEM2), see col.5, lines 30-33, local oscillators (NCOs) for generating “internal multicarrier” (cos, -sin), a plurality of frequency conversion units (102A, 102B, 102C) for downconverting the received signal to baseband signals, the separation of the multicarrier is executed after a quantization (A/D).

Claim Rejections - 35 USC § 103

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Jou as applied to claim 1 above.

Jou discloses all the subject matter claimed except for the number of “frequency transition units,” i.e., the frequency downconverters (102A, 102B, 102C). Jou shows three units because the number of carriers in the transmitted multi-carrier is three. In other words, that the number of the frequency downconverters depends on the number of carriers used in the transmission and the number of carriers to use is an obvious matter of

Art Unit: 2638

design choice. Thus, it would have been obvious to use six frequency downconverters for demodulation of a multicarrer signal having six carriers.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ojard (US 6,327,311) teaches separating a multicarrier transmission using respective downconversion and filtering.

Allowable Subject Matter

7. Claims 2-7,9-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
